

Tips for Velocity Questions

1. Ground Speed = Air Speed + Wind Speed

$$\vec{g} = \vec{a} + \vec{w}$$

- Ground Speed is how the plane appears to be moving looking at it from the ground.
 - Air Speed is the actual direction the pilot is steering the plane.
 - Wind Speed is the effect that the wind has on the plane.
2. Use Trig Ratios, The Sine Law and The Cosine Law, where applicable.
